MANEUVERING SPACE & REACH REQUIREMENTS

4.10. Elevators.

4.10.1 General. Accessible elevators shall be on an accessible route and shall comply with 4.10 and with ASME A 17.1 1990, Safety Code for Elevators and escalators. Freight elevators shall not be considered as meeting the requirements of this section unless the only elevators provided are used as combination passenger and freight elevators for the public and employees.

4.10.2 Automatic Operation. Elevator operation shall be automatic. Each car shall be equipped with a self-leveling feature that will automatically bring the car to floor landings within a tolerance of 1/2 in (13 mm) under rated loading to zero loading conditions. This self-leveling feature shall be automatic and independent of the operating device and shall correct the overtravel or undertravel.

4.10.3 Hall Call Buttons. Call buttons in elevator lobbies and halls shall be centered at 42 in (1065 mm) above the floor. Such call buttons shall have visual signals to indicate when each call is registered and when each call is answered. Call buttons shall be a minimum of 3/4 in (19 mm) in the smallest dimension. The button designating the up direction shall be on top. (see fig. 20) Buttons shall be raised or flush. Objects mounted beneath hall call buttons shall not project into the elevator lobby more than 4 in (100 mm).

4.10.4 Hall Lanterns. A visible and audible signal shall sound once for the top direction and twice for the down direction or shall have verbal announcers say up or down. Visible signs shall have the following features.

(1) Hall lantern fixtures shall be mounted so that their centerline is at least 72 in (1830 mm) above the lobby floor (see fig 20).

(2) Visual elements shall be at least 2 1/2 in (54 mm) in the smallest dimension.

(3) Signals shall be visible from the vicinity of the hall call button (see fig. 20). In-car lanterns located in cars, visible from the vicinity of hall call buttons, and conforming to the above requirements, shall be acceptable.

4.10.5 Raised and Braille Characters on Hoistway Entrances. All elevator hoistway entrances shall have raised and Braille floor designations provided on both jambs. The centerline of the characters shall be 60" (1525 mm) above finish floor. Such Characters shall be 2" (50 mm) high and shall comply with 4.30.4. Permanently applied plates are acceptable if they are permanently fixed to the jambs. (see fig. 20).

The highest operable part of a two-way communication system shall be a maximum of 48"(1220mm) from the floor of the car. It shall be identified by a raised symbol and lettering complying with 4.30 and located adjacent to the device. If the uses a handset then the length of the cord from the panel to the handset shall be at least 29"(735mm). General Construction Notes:

1. It is not the intent of these construction notes to cover all details and/or the specification requirements for the project.
2. The CONTRACTOR shall provide reasonable access to residential, commercial and public properties in the project area.
3. The CONTRACTOR shall be responsible for furnishing all labor, materials, equipment and incidental items needed to provide adequate construction signing, barricades, traffic control devices and other related items for the project area, during the construction period. Maintenance and protection of traffic must comply with the MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES. This work is to be considered an incidental item and the cost of this item is to be included in other pay items.
4. All existing utility locations shown are approximate based off of information provided by the utility owner's. Prior to installation of any portion of the water, sewer or storm drain infrastructure shown in these plans the CONTRACTOR is to verify the locations (horizontal and vertical) of all existing utilities & utility unfrastructure in the project area prior to construction. Should there be any conflicts or discrepencies the CONTRACTOR is to notify ENGINEER in writing.
5. The CONTRACTOR shall bear full responsibility for the protection of all private and public utilities even though they may not be shown on the plans. Any utility that is damaged during construction shall be repaired or replaced to the satisfaction of the utility owner by the CONTRACTOR. This includes all service laterals of any kind.
6. The CONTRACTOR will not be responsible for demolishing or removing any existing above or below ground telephone, power, or gas lines but shall be responsible for coordinating his work with all local utility companies.
7. The CONTRACTOR shall verify all shown dimensions and elevations (existing and proposed) in the field and shall satisfy himself as to the accuracy between work set forth on these plans and the work required in the field. Any discrepancies shall be brought to the attention of the ENGINEER prior to construction.
8. The CONTRACTOR is required by law to notify Mississippi One Call @ 601-362-4374 at least 48 hours prior to construction to locate all existing utilities on site.
9. The CONTRACTOR shall be responsible for notifying all utility companies at a minimum of 48 hours prior to commencing work in the project area. Likewise, the CONTRACTOR is responsible for coordinating his work and that of the involved utilities in the project area.
10. All testing required by the project specifications or Utility Ordinances shall be done by an approved testing laboratory at the expense of the CONTRACTOR.
11. The CONTRACTOR shall restore all disturbed areas to match pre-construction condition or better after completion of the project.
12. The CONTRACTOR is to provide the ENGINEER a Certification that the project was completed according to the Project Plans and Specifications.
13. Roads to be kept clean of mud and debris at all times.
14. The CONTRACTOR shall carefully remove, store and reinstall all City/County/State owned signs whose removal is required by his construction work in the project area. It shall be the CONTRACTOR'S responsibility to arrange for the appropriate agency to inspect all signs scheduled for removal prior to their removal. Once said signs have been removed, it will be assumed that they were in good condition at the time of removal. Any signs damaged or lost by the CONTRACTOR shall be replaced at no cost to the appropriate agency.
18. Elevations are based on M.S.L. Datum.
19. The CONTRACTOR shall procure all required permits and licenses; pay all fees, charges and taxes (including sales and use taxes); give all required notices; maintain an orderly and safe flow of traffic; maintain proper stormwater drainage; locate and avoid disrupting all existing utilities; transport all equipment and materials as required by any agency having jurisdiction over any road use thereof; transport, handle and install all materials in accordance with their respective manufacturer's recommendations and project specifications; properly backfill all trenches and excavations; maintain a clean and orderly work site; promptly remove all equipment, debris and excess soils and/or materials on completion of the work; and restore to substantially the same or better conditions all disturbed pavements and ground surfaces.
20. No activity required for the accomplishment of the Work is to be performed when soil conditions are not conducive therefor. Drainage shall be maintained at all times. CONTRACTOR shall conduct its operations and activities in such a manner as to minimize the erosion of soils and the deposition of sediments into existing drainage courses downstream of project work site or onto adjacent properties.
21. CONTRACTOR shall be responsible for removing any and all existing structures necessary for completion of the work described in these plans unless otherwise noted.

Site Grading And Paving Notes:

1. Technical specification for materials and construction methods for paving and earthwork this project shall conform to the 1990 edition of MISSISSIPPI STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION, these plans and specifications and the geotechnical report titled "Surface Investigation For Holiday Inn Express, Southcrest Parkway, SOUTHAVEN, Mississippi", Prepared By Geotechnical Associates Network, LLC. Should there be any conflicts between the notes stated herein or the project specifications with the geotechnical report, the GEOTECHNICAL REPORT shall govern.
2. Earth excavation shall include clearing, stripping, and the stockpiling of topsoil, removing unsuitable materials, the construction of embankments, non-structural fills, final shaping and trimming to the lines, grades and cross sections shown on the plans. All unsuitable or excess material shall be disposed of as directed by the ENGINEER.
3. As an initial step of site preparation, trees and vegetation within the construction limits should be removed. Tree and vegetation removal (clearing and grubbing) will include stumps and root systems. Holes created by tree and stump removal should be backfilled with compacted select fill soils.
4. After clearing and grubbing, stripping (6" minimum depth) should be performed to a sufficient depth within construction areas to remove organic-laden surficial soils, vegetation, debris, brush and roots (topsoil). Topsoil excavated shall be stockpiled on the site in areas designated by the ENGINEER until such time that this topsoil can be used for final grading. This is not a pay item, but shall be an absorbed cost.
5. Once clearing, grubbing, and stripping has been completed the CONTRACTOR shall excavate areas that are to be cut to reach plan grade. CONTRACTOR shall then notify the GEOTECHNICAL ENGINEER for a field inspection of the subgrade prior to placement of any select fill. CONTRACTOR shall have equipment available to perform a proof roll or for further excavation should the GEOTECHNICAL ENGINEER deem necessary. Fine-grained soils exposed after stripping, excavation and undercutting are susceptible to pumping and/or becoming unstable and rutting excessively under wet conditions. The construction techniques, types of equipment utilized and site drainage provided during construction will have a great effect on the performance of the fine-grained soils throughout the project. The routing of rubber-tired equipment should be controlled to minimize traffic over the site. All traffic should be discouraged during periods of inclement weather.
6. Import select fill material shall consist of select, non-organic and debris-free silty clays (CL) having a plasticity index (PI) within the range of 8 to 22 and a liquid limit less than 40.
7. Fill soils should be compacted from lifts not exceeding 8" in loose thickness to not less than 98% of standard Proctor maximum dry density (ASTM D 698). Stability must be evident during compaction of each lift before any subsequent lifts of fill material are added.
8. The grading and construction of the site improvements shall not cause the ponding of storm water. All areas adjacent to these improvements shall be graded to allow positive drainage. Positive drainage shall be maintained at all times.
9. The CONTRACTOR shall take special care in grading near trees, bushes and shrubs which are not to be removed so as not to cause injury to roots or trunks.
10. The CONTRACTOR shall use care in grading or excavation near any and all existing items which are not indicated to be removed. Any damage done to these existing items by the CONTRACTOR'S operations shall be repaired at the CONTRACTOR'S expense.
11. Proposed elevations indicate finished conditions. For rough grading elevations allow for thickness of proposed items (roads, walks, drives, etc.) or topsoil as shown.
12. Street paving and curbs to remain shall be protected from damage, and if damaged, shall be replaced promptly.

Water/Sewer Notes:

1. All materials and construction shall be in accordance with these plans and project specifications.
2. The CONTRACTOR shall provide all the materials and appurtenances necessary for the complete installation of water and sewer utilities.
3. The CONTRACTOR shall make all ties to existing utilities and coordinate them with the CITY OF SOUTHAVEN Public Works Department.
4. All manholes, valve boxes, and fire hydrants shall be adjusted to proper line and finished grade by the CONTRACTOR after placing of pavement and before final acceptance.
5. Trenching and embedment work shall conform to all requirements and shall follow the typical cross-section detail for trenching. Unless specified otherwise, backfill material shall be compacted to 95% density of Standard Proctor in accordance with ASTM D-698. All backfill material shall be compacted in 6" layers.
6. The end of water and sewer lines shall be tightly capped or plugged and marked until such time as service connections are made or lines are extended.
7. All water lines and sanitary sewer lines shall be installed with a minimum of three feet (3') of cover over the top of the pipe at finished grade or as shown otherwise. Where installed in a roadway section the minimum cover over the top of the pipe shall be four feet (4'). Backfill shall be placed in 6" lifts and compacted to 96% Standard Proctor density.
8. Ten feet (10') of horizontal clearance is required between all water and sewer lines. At locations where the water and sewer lines must cross each other there shall be a minimum clearance of 18" with the water passing over the sewer. If these separations cannot be met, the sewer line shall be constructed to the same specifications as the water line and be water tight until such a point where minimum separation can be met. Where gravity flow sewers cross above water lines, the sewer pipe for a distance of ten (10') feet, each side of the crossing, either shall be ductile iron pressure pipe without any joint closer than three (3') feet to the crossing, or shall be fully encased in concrete.
9. The utility CONTRACTOR shall be responsible for testing the water and sewer systems in accordance with the MSDH REGULATIONS and shall notify the ENGINEER and the CITY OF SOUTHAVEN at least 48 hours in advance of performing any tests. Additional tests on water and sewer lines will be as required by the CITY OF SOUTHAVEN. A copy of all test results shall be faxed to BENCHMARK ENGINEERING & SURVEYING, LLC @ 601-591-0711.
10. The lengths of the sanitary sewer lines are measured from center of manhole to center of manhole.
11. Fittings for all applications of water and sewer lines shall be an absorbed cost.

Storm Drain Notes:

1. Technical specifications for all materials and construction methods for the storm drain construction shall be in accordance with the latest edition of MISSISSIPPI STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION or the manufacturer's recommendation.
2. Joints shall be constructed and jointed together in such a manner that no spill through of backfill will occur.
3. Any additional excavation required for installation of Bedding Material for storm drain pipe shall be included in the contract price per linear foot of storm drainage pipe.
4. At the expense of the CONTRACTOR, the CONTRACTOR shall maintain existing drainage patterns and construct temporary structures, embankments and culverts as required to maintain the existing drainage system and capacity in the work area. Any and all items constructed during the progress of work that are not necessary for the final drainage system are to be removed and the area restored to is original condition.
5. Pipes under paved areas can be R.C.P. or HP pipe as manufactured by ADS.

Erosion Control Notes:

1. Erosion and sediment control materials and installation shall be in accordance with the latest edition of MISSISSIPPI STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION.
2. The CONTRACTOR shall take all necessary measures to control erosion and water pollution through the construction period. All temporary erosion control measures shall be in place before earth moving operations begin. Clearing and grubbing shall be held to the minimum width necessary to accommodate roadway slopes. Embankments and excavated areas shall be promptly stabilized to minimize erosion. Baled straw erosion checks and silt fencing shall be used along the toe of fill slopes, in ditches, and in other areas where erosion is a problem and silt laden runoff may enter a stream or adjacent property.
3. Any stockpiled soil or fill material shall be located and treated in a manner to prevent silt from entering streams. No excavated material shall be discharged into ditches. The CONTRACTOR shall dispose of all excavated material in a location approved by the ENGINEER.
4. All soil erosion and sediment control measures shall be continually maintained. The CONTRACTOR shall keep streets and sidewalks adjacent to the limits of construction free of mud and debris.
5. CONTRACTOR shall comply with the erosion control requirements of the CITY OF SOUTHAVEN and the requirements of the Mississippi Department of Environmental Quality.
6. CONTRACTOR to utilize Best Management Practices for erosion and sediment control.

DRYERBOX INSTALLATION

DRYER VENTING: MECHANICAL CONTRACTOR SHALL BE RESPONSIBLE FOR RUNNING ALL DUCTWORK FOR THE DRYER EXHAUST SYSTEM. ALL CONCEALED DRYER DUCTING MUST BE RIGID METAL (GALVANIZED OR ALUMINUM) MINIMUM OF 4" IN DIAMETER, SMOOTH 30 GA. CLEAN, UNOBSTRUCTED, FRICTIONLESS DUCTS (NO FLEXIBLE DUCT ALLOWED IN CONCEALED AREAS). SEAL ALL JOINTS WITH FOIL BACKED PRESSURE SENSITIVE DUCT TAPE MEETING THE REQUIREMENTS OF UL 181. DUCT JOINTS SHALL BE INSTALLED SO THAT THE MALE END OF THE DUCT POINTS IN THE DIRECTION OF THE AIRFLOW. DO NOT USE RIVETS OR SCREWS IN THE JOINTS OR ANYWHERE ELSE IN THE DUCT AS THESE WILL ENCOURAGE LINT COLLECTION.

DRYERBOX RECEPTACLE SHALL BE METAL AND BE INSTALLED AS LOW AS POSSIBLE AS TO PERMIT THE PROPER AND SAFE COLLECTION OF THE DRYER TRANSITION HOSE. DRYERBOX SHOULD BE RESTING ON THE BOTTOM PLATE AND BE LOCATED AT OR NEAR THE CENTERLINE OF THE PROPOSED DRYER APPLIANCE. RIGID DUCT SHOULD PENETRATE DRYERBOX PORT 2 INCHES TO PROVIDE FOR FUTURE CONNECTION AND STORAGE OF TRANSITION HOSE. BASEBOARD SHALL BE "BUTTED" UP TO THE FIXED EXTENSION RIM AND SLIGHTLY BACK-CUT. DRYERBOX SHOULD BE CAULKED AND THEN PAINTED WITH THE TRIM PAINT. FOR USAGE IN A ONE-HOUR WALL ASSEMBLY, UL REQUIRES THAT BATT INSULATION BE STUFFED AROUND THE DRYERBOX AND IN THE ENTIRE WALL CAVITY CELL.

LENGTH OF CONCEALED RIGID METAL DUCTING SHALL NOT EXCEED 25 FEET. DEDUCT 5 FEET FROM THE ALLOWABLE LENGTH FOR EVERY 3.5" RADIUS 90 DEGREE ELBOW AND TWO AND A HALF FEET FOR EVERY 45 DEGREE FITTING. DRYER VENTING SHALL BE INDEPENDENT OF ANY OTHER SYSTEMS (CHIMNEYS OR EXHAUST VENTS). TERMINATION OF DRYER VENTING MUST BE TO THE EXTERIOR WITH A PROPER HOOD OR ROOF JACK EQUIPPED WITH A BACK-DRAFT DAMPER. SMALL ORIFICE METAL SCREENING SHOULD NOT BE PART OF THE HOOD OR ROOF JACK AS THIS WILL ACCELERATE LINT ACCUMULATION AND BLOCKAGE. THE HOOD OPENING SHOULD POINT DOWN AND EXHIBIT 12 INCHES OF CLEARANCE BETWEEN THE BOTTOM OF THE HOOD AND THE GROUND OR OTHER OBSTRUCTION. VERIFY MANUFACTURER'S RECOMMENDATIONS FOR ANY OTHER FACTORS.

   - G. GROUND FAULT INTERRUPT CIRCUITS.

6. GROUNDING FOR POOL AND SPA LIGHTS AND FOR PUMP MOTORS IS TO BE IN CONDUIT.

7. ALL UNDERWATER LIGHT FIXTURES MUST BE SUBMERGED BEFORE BEING OPERATED.

8. UNDERWATER LIGHT FIXTURES MUST BE REMOVABLE FROM THE WATER FOR RELAMPING OR NORMAL MAINTENANCE WITHOUT REQUIRING DRAINAGE OF THE POOL.

9. NICHE LIGHT FIXTURES SHALL BE SUPPLIED WITH CORDS WHICH ARE 50 FEET LONG, EXCEPT AS NOTED. CONDUIT RUNS FROM EACH NICHE TO THE APPROPRIATE CONNECTION POINT (DECK BOX, SUBMERSIBLE JUNCTION BOX, ETC.) MUST BE AS DIRECT AS POSSIBLE AND A TOTAL LENGTH SHORTER THAN THE CORD WHEN PROPERLY INSTALLED. TO PROPERLY INSTALL FIXTURE AND CORD, LEAVE ENOUGH CORD IN THE NICHE SO THAT WHEN SERVICING IS REQUIRED THE FIXTURE CAN BE LIFTED ABOVE WATER LEVEL WITHOUT DRAINING THE POOL (WRAP EXTRA CORD LENGTH AROUND THE FIXTURE WHEN PLACING IN NICHE).

10. WHEN RESEALING A FIXTURE (SUCH AS AFTER RELAMPING, ETC.) CARE MUST BE TAKEN TO TIGHTEN THE SCREWS OR BOLTS IN SUCH A FASHION AS TO CREATE EQUAL PRESSURE ON THE GASKET ALL THE WAY AROUND THE FIXTURE.

11. ALL THREADED CONNECTIONS MUST BE MADE WITH NATIONAL TAPERED PIPE THREADS (N.P.T.) AND APPROVED THREAD SEALANT.

12. AN APPROVED POTTING COMPOUND (LOW MELTING PARAFFIN OR RTV SILASTIC) MUST BE USED TO FILL THE ENTRY OF THE JUNCTION BOX TO PREVENT MOISTURE MIGRATION INTO THE CONDUIT. AFTER POTTING THE JUNCTION BOX, ATTACH THE COVER PLATE SO THAT IT IS WATERTIGHT.

13. ALL METALLIC PIPING SYSTEMS ASSOCIATED WITH THE POOL MUST BE BONDED TO THE EQUIPMENT GROUNDING CONDUCTOR OF THE BRANCH CIRCUIT SUPPLYING THE POOL.

14. UNDERWATER TYPE SO AND ST CORD CANNOT BE SPLICED EXCEPT IN AN APPROVED UNDERWATER JUNCTION BOX OR UL LISTED UNDERWATER SPLICE KIT.

15. MAXIMUM EXPOSED CORD LENGTH IS 10 FEET. ANY LENGTH BEYOND 10 FEET MUST BE PROTECTED BY CONDUIT.

16. THE CONDUIT SYSTEM MUST BE WATERTIGHT FROM THE PANEL TO THE POOL.

17. ALL CONDUITS EXPOSED TO MOISTURE (BELOW GROUND, IN THE POOL, ETC.) MUST BE OF A NON-CORROSIBLE MATERIAL.
